

Energy Performance Certificate

AUDIT COPY
NOT FOR ISSUE

Apartment 135 The Reach 39 Leeds Street
LIVERPOOL
L3 2DB

Dwelling type: Mid-floor flat
Date of assessment: 05 June 2009
Date of certificate: 05 June 2009
Reference number: 8805-4156-2220-7306-0613
Total floor area: 67 m²

This home's performance is rated in terms of the energy use per square metre of floor area, energy efficiency based on fuel costs and environmental impact based on carbon dioxide (CO₂) emissions.

The energy efficiency rating is a measure of the overall efficiency of a home. The higher the rating the more energy efficient the home is and the lower the fuel bills are likely to be.

The environmental impact rating is a measure of a home's impact on the environment in terms of carbon dioxide (CO₂) emissions. The higher the rating the less impact it has on the environment.

Estimated energy use, carbon dioxide (CO₂) emissions and fuel costs of this home

	Current	Potential
Energy use	233 kWh/m ² per year	204 kWh/m ² per year
Carbon dioxide emissions	2.4 tonnes per year	2.1 tonnes per year
Lighting	£73 per year	£37 per year
Heating	£230 per year	£160 per year
Hot water	£150 per year	£119 per year

Based on standardised assumptions about occupancy, heating patterns and geographical location, the above table provides an indication of how much it will cost to provide lighting, heating and hot water to this home. The fuel costs only take into account the cost of fuel and not any associated service, maintenance or safety inspection. This certificate has been provided for comparative purposes only and enables one home to be compared with another. Always check the date the certificate was issued, because fuel prices can increase over time and energy saving recommendations will evolve.

To see how this home can achieve its potential rating please see the recommended measures.

This EPC and recommendations report may be given to the Energy Saving Trust to provide you with information on improving your dwelling's energy performance.

For advice on how to take action and to find out about offers available to help make your home more energy efficient call 0800 512 012 or visit www.energysavingtrust.org.uk/myhome

About this document

The Energy Performance Certificate for this dwelling was produced following an energy assessment undertaken by a qualified assessor, accredited by BRE Certification, to a scheme authorised by the Government. This certificate was produced using the RdSAP 2005 assessment methodology and has been produced under the Energy Performance of Buildings (Certificates and Inspections)(England and Wales) Regulations 2007 as amended. A copy of the certificate has been lodged on a national register.

Assessor's accreditation number: BREC201898
Assessor's name: Matthew Thorn
Company name/trading name: Cuddly Bears Ltd
Address: 33-35, Cheapside, Liverpool, L2 2DY
Phone number: 0151 255 0066
Fax number: 0151 255 0060
E-mail address: epc@cuddly-bears.com
Related party disclosure:

If you have a complaint or wish to confirm that the certificate is genuine

Details of the assessor and the relevant accreditation scheme are as above. You can get contact details of the accreditation scheme from their website at www.breassessor.co.uk together with details of their procedures for confirming authenticity of a certificate and for making a complaint.

About the building's performance ratings

The ratings on the certificate provide a measure of the building's overall energy efficiency and its environmental impact, calculated in accordance with a national methodology that takes into account factors such as insulation, heating and hot water systems, ventilation and fuels used. The average Energy Efficiency Rating for a dwelling in England and Wales is band E (rating 46).

Not all buildings are used in the same way, so energy ratings use 'standard occupancy' assumptions which may be different from the specific way you use your home. Different methods of calculation are used for homes and for other buildings. Details can be found at www.communities.gov.uk/epbd

Buildings that are more energy efficient use less energy, save money and help protect the environment. A building with a rating of 100 would cost almost nothing to heat and light and would cause almost no carbon emissions. The potential ratings in the certificate describe how close this building could get to 100 if all the cost effective recommended improvements were implemented.

About the impact of buildings on the environment

One of the biggest contributors to global warming is carbon dioxide. The way we use energy in buildings causes emissions of carbon. The energy we use for heating, lighting and power in homes produces over a quarter of the UK's carbon dioxide emissions and other buildings produce a further one-sixth.

The average household causes about 6 tonnes of carbon dioxide every year. Adopting the recommendations in this report can reduce emissions and protect the environment. You could reduce emissions even more by switching to renewable energy sources. In addition there are many simple everyday measures that will save money, improve comfort and reduce the impact on the environment. Some examples are given at the end of this report.

Visit the Government's website at www.communities.gov.uk/epbd to:

- Find how to confirm the authenticity of an energy performance certificate.
- Find how to make a complaint about a certificate or the assessor who produced it.
- Learn more about the national register where this certificate has been lodged - the Government is the controller of the data on the register.
- Learn more about energy efficiency and reducing energy consumption.

Recommended measures to improve this home's energy performance

AUDIT COPY - NOT FOR ISSUE

Apartment 135 The Reach 39 Leeds Street
LIVERPOOL
L3 2DB

Date of certificate: 05 June 2009
Reference number: 8805-4156-2220-7306-0613

Summary of this home's energy performance related features

The following is an assessment of the key individual elements that have an impact on this home's performance rating. Each element is assessed against the following scale: Very poor / Poor / Average / Good / Very good.

Elements	Description	Current performance	
		Energy Efficiency	Environmental
Walls	System built, as built, insulated (assumed)	Good	Good
Roof	(another dwelling above)	-	-
Floor	(other premises below)	-	-
Windows	Fully double glazed	Good	Good
Main heating	Room heaters, electric	Very poor	Poor
Main heating controls	Appliance thermostats	Good	Good
Secondary heating	None	-	-
Hot water	Electric immersion, off-peak	Average	Poor
Lighting	No low energy lighting	Very poor	Very poor
Current energy efficiency rating		C 70	
Current environmental impact (CO ₂) rating			C 72

Low and zero carbon energy sources

None

Recommendations

The measures below are cost effective. The performance ratings after improvement listed below are cumulative, that is they assume the improvements have been installed in the order that they appear in the table.

Lower cost measures (up to £500)	Typical savings per year	Performance ratings after improvement	
		Energy efficiency	Environmental
1 Increase hot water cylinder insulation	£21	C 71	C 75
2 Low energy lighting for all fixed outlets	£27	C 73	C 76
Sub-total	£48		
Higher cost measures			
3 Fan-assisted storage heaters	£91	C 80	C 75
Total	£139		
Potential energy efficiency rating		C 80	
Potential environmental impact (CO ₂) rating			C 75

Further measures to achieve even higher standards

None

Improvements to the energy efficiency and environmental impact ratings will usually be in step with each other. However, they can sometimes diverge because reduced energy costs are not always accompanied by a reduction in carbon dioxide (CO₂) emissions.

About the cost effective measures to improve this home's performance ratings

If you are a tenant, before undertaking any work you should check the terms of your lease and obtain approval from your landlord if the lease either requires it, or makes no express provision for such work.

Lower cost measures (typically up to £500 each)

These measures are relatively inexpensive to install and are worth tackling first. Some of them may be installed as DIY projects. DIY is not always straightforward, and sometimes there are health and safety risks, so take advice before carrying out DIY improvements.

1 Hot water cylinder insulation

Increasing the thickness of existing insulation around the hot water cylinder will help to maintain the water at the required temperature; this will reduce the amount of energy used and lower fuel bills. An additional cylinder jacket or other suitable insulation layer can be used. The insulation should be fitted over any thermostat clamped to the cylinder. Hot water pipes from the hot water cylinder should also be insulated, using pre-formed pipe insulation of up to 50 mm thickness, or to suit the space available, for as far as they can be accessed to reduce losses in summer. All these materials can be purchased from DIY stores and installed by a competent DIY enthusiast.

2 Low energy lighting

Replacement of traditional light bulbs with energy saving recommended ones will reduce lighting costs over the lifetime of the bulb, and they last up to 12 times longer than ordinary light bulbs. Also consider selecting low energy light fittings when redecorating; contact the Lighting Association for your nearest stockist of Domestic Energy Efficient Lighting Scheme fittings.

Higher cost measures (typically over £500 each)

3 Fan assisted storage heaters

Modern storage heaters are much less expensive to run than the direct acting, on-peak heating system in the property. A dual-rate electricity supply is required to provide the off-peak electricity that these heaters use; this is easily obtained by contacting the energy supplier. Ask for a quotation for fan-assisted heaters with automatic charge control. As installations should be in accordance with the national wiring standards, only a qualified electrician should carry out the installation. Building Regulations apply to this work, so Building Control should be informed, unless the installer is registered with a competent persons scheme¹, and can therefore self-certify the work for Building Regulation compliance. Ask a qualified electrical heating engineer to explain the options, which might also include switching to other forms of electric heating.

About the further measures to achieve even higher standards

Not applicable

What can I do today?

Actions that will save money and reduce the impact of your home on the environment include:

- Ensure that you understand the dwelling and how its energy systems are intended to work so as to obtain the maximum benefit in terms of reducing energy use and CO₂ emissions.
- Check that your heating system thermostat is not set too high (in a home, 21°C in the living room is suggested) and use the timer to ensure you only heat the building when necessary.
- Make sure your hot water is not too hot - a cylinder thermostat need not normally be higher than 60°C.
- Turn off lights when not needed and do not leave appliances on standby. Remember not to leave chargers (e.g. for mobile phones) turned on when you are not using them.
- Close your curtains at night to reduce heat escaping through the windows.
- If you're not filling up the washing machine, tumble dryer or dishwasher, use the half-load or economy programme.

¹ For information on competent persons schemes enter "existing competent person schemes" into an internet search engine or contact your local Energy Saving Trust advice centre on 0800 512 012.

Reduced Data SAP 2005 Input Data Summary

Apartment 135 The Reach 39 Leeds Street
LIVERPOOL

Located in: England & Wales
Date of assessment: 05 June 2009
Date of certificate: 05 June 2009
UPRN: 0523812668
Reference number: 8805-4156-2220-7306-0613

Country and Language

England & Wales, ENGLISH

Property overview

Dwelling type:	Flat	Main property age:	2003 - 2006
Built form:	Enclosed End Terrace	Perimeters and areas:	Internal
Habitable rooms:	2		
Heated habitable rooms:	2		
Terrain type:	Dense Urban		
Transaction type:	Rental (Private)		
Basis of certificate:	Full survey by you		
Sampling approach:	None (full survey)		
Visited property:	Yes		

Main property construction

Lowest floor	area = 67.121	room height = 2.374	perimeter = 15.191
Wall construction	System build with insulation as built		
Roof construction	Dwelling above,		

Windows

Area of windows:	More than typical
Multiple glazing:	100% installed in or after 2002
Measured windows:	None

Conservatory

There is no conservatory

Shelter factors (flats and maisonettes only)

Floor number:	4	Flat corridor:	Heated
Floors in block:	9	Heat loss floor:	Other flat below
Sheltered wall length:	m		

Space heating and controls

Main heating:	691 - Room heater, Electric (direct acting) room heater, Panel, convector or radiant heaters		
Main heating fuel:	39 - Electricity, electricity		
Heat emitter:	Radiators		
Boiler flue type:			
Boiler fan type:			
Main heating controls:	2602 - ROOM HEATER SYSTEM, Appliance thermostats		
Secondary heating:	-		
Secondary heating fuel:	-		

Water heating and cylinder

Water heating:	903 - Electric immersion (on-peak or off-peak)		
Water heating fuel:	39 - Electricity, electricity		
Solar panel:	No	Immersion type:	Dual elements
Cylinder present:	Yes		
Cylinder size:	Large (over 170 litres)	Cylinder insulation type:	Jacket
Cylinder insulation:	50 mm	Cylinder thermostat:	Yes

Miscellaneous

Open fireplaces:	0	Photovoltaic cells:	0%
Ventilation type:	MEV	Low energy lights:	0%
Electricity meter:	Dual	Main gas supply:	No
Wind turbines:	0		

Measures

Selected:	Cancelled:
Hot water cylinder insulation (C)	
Low energy lights (E)	
New or replacement storage heaters (L)
